CEE specializes in air pollution control systems for a wide variety of industries and applications. Here you see a scrubber designed to remove odors but our systems can be custom built to handle the most difficult fume and particulate applications.

316L Stainless Steel, Packed Bed Scrubber

We provide a single source responsibility for the design, fabrication, installation and startup of your custom built scrubber system. To assure effectiveness, a pilot test scrubber can be done at your facility to better identify configurations, preliminary results and costs.

Pilot Testing

*Packed Bed,*

*Venturi, Wet*

*And Dry Scrubbers*

*Dust Collection*

*Oxidizers*

*Heat Recovery*

This 20,000cfm, packed bed scrubber replaced an existing dust collection system where salt particles were building up on the surface of the bags so bad it made the system useless. The new scrubber system removes 1 micron and larger particles and the heat treating facility is extremely satisfied with it's performance.
